

SONDERSEMINAR/SPECIAL SEMINAR
LMU/MPQ

am: **Freitag, 28. Februar 2014**

Uhrzeit: **10:00 Uhr s.t.**

spricht: **Dr. Paolo Crivelli**
Institut für Teilchenphysik
ETH Zürich
HPK F 33
Otto-Stern-Weg 5
CH-8093 Zürich

Thema: **Precision Laser Spectroscopy of 1S-2S Transition
in Positronium**

Ort: **Max-Planck-Institut für Quantenoptik**
H.-W. Hörsaal/Großer Hörsaal
Hans-Kopfermann-Str. 1
D-85748 Garching

gez. Prof. T.W. Hänsch

ABSTRACT:

In this seminar, we report on the status of our measurement of the 1S-2S transition frequency of positronium (the electron-positron bound system). The aim of this experiment is to reach a precision of 0.5 ppb in order to cross check the bound state QED calculations.

Positronium, being a purely leptonic system, is free of hadronic corrections, and weak interaction effects are negligible at the current level of experimental uncertainty. This atom is thus a unique laboratory for testing bound-system QED.

We will also discuss the prospects of future improvements in this measurement and in the 1S-2S interval of muonium atoms (the positive muon-electron bound system).
